EDUCATION

Vellore Institute of Technology
B.Tech, Computer Science

Vellore, 2022 – 2026
CGPA: 8.19/10

EXPERIENCE

Data & AI Insights Analyst Intern — National University of Singapore

Dec 2024 – Jan 2025

Research internship at NUS (#8 globally, QS 2026; #1 in Asia) focused on building an AI powered product demand intelligence system for small business inventory decision making.

- Developed a **structured analytical workflow** combining **social media APIs**, **industry reports**, and **news feeds** to help small business owners interpret demand trends more consistently.
- Built a **cross category tracking model** covering **10+ demand and engagement metrics**, helping standardize how product demand was evaluated across categories.
- Converted **AI generated recommendation outputs into plain language weekly briefs** so non technical stakeholders could make inventory decisions without interpreting the underlying model.
- Deployed the workflow on **AWS**, enabling the analysis pipeline to be **reused and scaled across new product categories** without rebuilding the system from scratch.

Operations Analyst Intern — CMC Hospitals, Vellore

Aug 2025 – Dec 2025

Worked within operations at CMC Hospitals (#3 Medical Institution in India, NIRF 2025) supporting an internal platform designed to improve coordination, escalation tracking, and workflow visibility across clinical teams.

- Mapped **coordination breakdowns across 4 clinical and operations teams**, pinpointing where handoffs failed, escalations went untracked, and case visibility dropped, structuring these into **clear problem statements for leadership review**.
- Built a **centralised tracking and reporting system** that gave leadership a **consolidated view of operational delays and unresolved issues across departments**, replacing scattered updates with a single structured source.
- Prepared **recurring management summaries** translating raw operational data into **clear findings, root causes, and process recommendations** used directly in workflow review meetings.
- Worked with **frontline staff and hospital operations teams** to ensure platform decisions reflected **actual workflow constraints**, flagging gaps between **operational needs and implementation priorities**.

PROJECTS

Product Recommendation & Demand Intelligence System — Python · SQL · AWS

[Link](#)

- Combined data from **social media APIs**, **industry reports**, and **news feeds** to build a system that helped small retailers identify which products showed the **strongest demand signals**.
- Built and deployed a **demand scoring pipeline on AWS** that generated **ranked product recommendations across categories** without manual analysis.

Global Carbon Emission Tracker — Power BI · Python

[Link](#)

- Structured and analyzed **2 years of emissions data across 50 countries** to enable consistent comparison of carbon trends across regions.
- Built **interactive dashboards** allowing users to isolate country level trends, compare regional performance, and track emissions over time.

Forest Fire Risk Prediction Model — Python · Scikit-learn · Geospatial Data

[Link](#)

- Built a wildfire risk prediction model in response to the **2025 LA wildfires**, using **weather and vegetation data** to identify high risk areas before outbreaks occurred.
- Converted model outputs into **simple risk classifications (low / medium / high)** so non technical users could interpret results and respond more easily.

LEADERSHIP

Manager, International Relations — graVITas · VIT Student Council

2025

graVITas is one of Asia's largest international techno management fests (16 editions, 207+ competitions, Rs.30L+ in prizes) held annually at VIT with participation from universities across India and abroad.

- Elected as **1 of 5 Managers from 300 student council members**, chosen from a student body of 50,000+ heading the International Relations Committee for the fest.
- Led coordination across **5 cross functional teams** supporting **150+ international delegates** managing stakeholder communication, structured updates, and direct engagement with external partners including CNN News.

SKILLS

Analytics & Data: SQL · Python · Power BI · Excel · AWS

AI & Tools: RAG · Prompt Engineering · AI APIs · Cursor

Business & Development: Problem Structuring · KPI Design · Process Analysis · Workflow Improvement

Communication & Delivery: Stakeholder Communication · Executive Summaries · Agile · Jira · Confluence
